A SUSTAINABLE CLOTHING SWAP PLATFORM

TRADE.

Upload what you don't wear. Swipe what you do. **Swap, don't shop.**

Trade what
don't use

Find what

See how it works

The concept.

TRADE is a mobile-first platform where people exchange clothes they no longer wear, without spending real money. Users upload an item, the app understands it, and they start swiping through pieces from people nearby. Trade directly, or claim with coins.

01

Upload.

Take one photo. AI fills in category, size, color, condition, and assigns a coin value.

02

Swipe.

Browse items from people nearby. Pass, save or claim, one card at a time.

03

Trade.

Either spend coins to claim, or propose a direct swap from your wardrobe. Meet up or post.

A community, not a marketplace.

Existing platforms push selling. TRADE pushes swapping. Items get a second life, fast-fashion takes a smaller bite, and users keep coins, not cash, in motion.

FOR

Students.

Low buying power, fast-changing wardrobes.

FOR

Young families.

Kids outgrow clothes every season. Items don't have to be thrown out.

FOR

Eco-conscious.

People who want to consume less and waste less.

Navigation & **header.**

Five anchor screens. The Upload button is the heart of the bar: raised, yellow, always within thumb's reach. The header always shows who you are: your logo, your coins, your inbox.

Top header

Logo (left) → identity. Coin counter + notification bell (right) → status.

Bottom bar

Home → swipe feed. Messages → chats & matches. Upload → camera flow. Search → filter by category, size, distance. Profile → wardrobe & coin history.

First **visit.**

Three quick steps before the swipe feed opens. The app learns who you are and what you want, so the very first card it shows is already relevant.

These three answers seed the feed. No empty state: even a fresh account opens straight into clothes worth swiping on.

Home & detail.

The two screens at the heart of the app. Browse on the home feed, dive deeper into any item that catches the eye.

02 ITEM DETAIL

SCREEN 01 · SWIPE

Three gestures.

- **Swipe left:** Pass.
- **Swipe right:** Claim.
- **Tap card:** Open detail.

SCREEN 02 · DETAIL

Everything to decide.

Three badges up top: size, condition, coin value. Below: the owner card with rating, location and a link to their profile. An AI-written description of the item. Two CTAs at the bottom: **Send a message** or **Claim for X coins**.

Upload *three taps.*

Friction kills supply. One photo, one wait, one confirm. AI does the rest.

STEP 01

Photo. Centre the item on a plain surface.

STEP 02

Analyse. AI reads category, size, condition.

STEP 03

Verify. Tweak any field, see your coin reward, hit Trade.

01 PHOTO

02 ANALYSE

03 VERIFY

Every AI-filled field stays editable. The coin reward reflects category, condition and demand, not retail price.

Profile & wallet.

Where users see themselves: the items they've put up, the trades they've completed, and the coin balance fuelling the next swap.

01 MY ARTICLES

The user's wardrobe. Tap an item to edit or take it down.

02 TRADES DONE

A history of every successful swap.

03 WALLET

Coin balance, available vs reserved, transaction log, and coin bundles.

PROFILE HEADER

Avatar with a sunburst frame. Name, city and membership year. A short bio line ("I would like to trade clothes, what do you got?") plus three quick stats: **trades**, **stars**, **coins**.

WALLET

A dark balance card showing total coins, with **available** and **reserved** split out. Reserved = coins locked against pending claims. Recent transactions are colour-coded: green for incoming, red for spent, neutral for in-progress.

Two ways to **trade.**

Every transaction starts the same way: a claim. From there, the owner picks the path: accept coins, or open a direct swap.

System 01 • Claim with coins

System 02 • Direct trade (free)

WHEN TO USE COINS

When the user wants something specific and has no matching item to offer. Coins keep the loop turning even when wardrobes don't line up.

WHEN TO SWAP

When both sides have something the other wants. Zero coins move; the wardrobes do the work.

The **coin.**

A virtual unit that keeps the platform moving when wardrobes don't match up. Always visible in the header. Always earned before it's spent.

A · EARN

Earn coins.

- Welcome bonus at signup.
- Uploading a new item.
- Completing a successful trade.
- Verified profile bonus.

B · SPEND

Spend coins.

- Claim an item with coins.
- Pay for postal shipping.
- Boost a listing in the swipe feed.

C · BUY

Buy coins.

- Optional in-app purchase.
- Small bundles only. Coins ≠ profit.
- Always cheaper to trade than to buy.

Always visible

The coin counter lives in the top-right of every screen. It is never hidden, never resettable, never converted back to cash. It only flows in one direction: earned, then spent.

TRADE.

20

HOW IT WORKS, IN ONE LINE.

Swap, don't shop.

Upload one photo. AI handles the details. Swipe through items from people nearby. Trade directly, or claim with coins. Meet up or post. That's the whole loop.
